

AUDIT COMMITTEE - 9TH JUNE 2020

Report of the Head of Finance and Property Services

Lead Member: Councillor Tom Barkley

Part A

ITEM 10 TREASURY OUTTURN REPORT 2019/20

Purpose of Report

To report to the Committee the Council's Treasury Management, Investment Management and Prudential Code Outturns for the year 2019/20.

Action Requested

That the contents of the report be noted.

Policy Justification

That we will deliver value for money for the people of Charnwood Borough Council.

Implementation Timetable including Future Decisions

The outturn report is submitted annually and presented to the Audit Committee for noting.

Report Implications

The following implications have been identified for this report:

Financial Implications

None.

Risk Management

There are no risks associated with this decision.

Background Papers: None

Officer to Contact: Lesley Tansey,
01509 634828
Head of Finance & Property Services
Lesley.Tansey@charnwood.gov.uk

Part B

Purpose

The Council is required by regulations issued under the Local Government Act 2003 to produce an annual treasury management review of activities and the actual prudential and treasury indicators for 2019/20. This report meets the requirements of both the CIPFA Code of Practice on Treasury Management (the Code) and the CIPFA Prudential Code for Capital Finance in Local Authorities (the Prudential Code).

During 2019/20 the minimum reporting requirements were that the full Council should receive the following reports:

- an annual treasury strategy in advance of the year (Council 25/02/2019)
- a mid-year treasury update report (Cabinet 14/11/2019)
- an annual review following the end of the year describing the activity compared to the strategy (this report)

The regulatory environment places responsibility on members for the review and scrutiny of treasury management policy and activities. This report is therefore important in that respect, as it provides details of the outturn position for treasury activities and highlights compliance with the Council's policies previously approved by members.

This Council confirms that it has complied with the requirement under the Code to give prior scrutiny to all of the above treasury management reports by the Audit Committee before they were reported to the full Council. Member training on treasury management issues is undertaken when required or requested in order to support the members' scrutiny role.

Background

This report summarises the following:-

- Capital activity during the year;
- Impact of this activity on the Council's underlying indebtedness, (the Capital Financing Requirement);
- The actual prudential and treasury indicators;
- Overall treasury position identifying how the Council has borrowed in relation to this indebtedness, and the impact on investment balances;
- Summary of interest rate movements in the year;
- Detailed debt activity and investment activity.

1. The Council's Capital Expenditure and Financing

The Council undertakes capital expenditure on long-term assets. These activities may either be:

- Financed immediately through the application of capital or revenue resources (capital receipts, capital grants, revenue contributions etc.), which has no resultant impact on the Council's borrowing need; or
- If insufficient financing is available, or a decision is taken not to apply resources, the capital expenditure will give rise to a borrowing need.

The actual capital expenditure forms one of the required prudential indicators. The table below shows the actual capital expenditure for 2019/20, this was financed in the year by Capital reserves, grants, external funding and Capital receipts, there was no borrowing required.

£m General Fund	2018/19 Actual	2019/20 Budget	2019/20 Actual
Capital expenditure			
Financed in year	2,985	5,779	2,236
Unfinanced Commercial Investments	0	5,000	0

£m HRA	2018/19 Actual	2019/20 Budget	2019/20 Actual
Capital expenditure			
Financed in year	6,086	9,094	8,203

2. The Council's Overall Borrowing Need (Capital Financing Requirement)

The Council's underlying need to borrow for capital expenditure is termed the Capital Financing Requirement (CFR). This figure is a gauge of the Council's indebtedness. The CFR results from the capital activity of the Council and resources used to pay for the capital spend. It represents the 2019/20 unfinanced capital expenditure (see above table), and prior years' net or unfinanced capital expenditure which has not yet been paid for by revenue or other resources.

Part of the Council's treasury activities is to address the funding requirements for this borrowing need. Depending on the capital expenditure programme, the treasury service organises the Council's cash position to ensure that sufficient cash is available to meet the capital plans and cash flow requirements. This may be sourced through borrowing from external bodies, (such as the Government, through the Public Works Loan Board [PWLB], or the money markets), or utilising temporary cash resources within the Council.

Reducing the CFR – the Council's (non HRA) underlying borrowing need (CFR) is not allowed to rise indefinitely. Statutory controls are in place to ensure that capital assets are broadly charged to revenue over the life of the asset. The Council is required to make an annual revenue charge, called the Minimum Revenue Provision – MRP, to reduce the CFR. This is effectively a repayment of the non-Housing Revenue Account (HRA) borrowing need, (there is no statutory requirement to reduce the HRA CFR). This differs from the treasury management arrangements which ensure that cash is available to meet capital commitments. External debt can also be borrowed or repaid at any time, but this does not change the CFR. The Council does not currently have a MRP charge in 2019/20.

The total CFR can also be reduced by:

- the application of additional capital financing resources, (such as unapplied capital receipts); or
- charging more than the statutory revenue charge (MRP) each year through a Voluntary Revenue Provision (VRP).

The Council's 2019/20 MRP Policy, (as required by MHCLG Guidance), was approved as part of the Treasury Management Strategy Report for 2019/20 on 25/2/2019. The Council has no MRP charge in 2019/20 as the GF CFR is nil.

The Council's CFR for the year is shown below, and represents a key prudential indicator. Borrowing activity is constrained by prudential indicators for gross borrowing and the CFR, and by the authorised limit.

Gross borrowing and the CFR - in order to ensure that borrowing levels are prudent over the medium term and only for a capital purpose, the Council should ensure that its gross external borrowing does not, except in the short term, exceed the total of the capital financing requirement in the preceding year (2019/20) plus the estimates of any additional capital financing requirement for the current (2020/21) and next two financial years. This essentially means that the Council is not borrowing to support revenue expenditure. This indicator allowed the Council some flexibility to borrow in advance of its immediate capital needs in 2019/20.

The table below highlights the Council's gross borrowing position against the CFR. The Council has complied with this prudential indicator.

	31 March 2019 Actual	31 March 2020 Budget	31 March 2020 Actual
Gross borrowing General Fund	£2,000m	£2,000m	£2,000m
Gross borrowing HRA	£79,190m	£79,190m	£79,190m
CFR	£81,820m	£81,820m	£81,820m
Under / (over) borrowed of CFR	£630k	£630k	£630k

The authorised limit - £111,000m the authorised limit is the “affordable borrowing limit” required by s3 of the Local Government Act 2003. Once this has been set, the Council does not have the power to borrow above this level. The table below demonstrates that during 2019/20 the Council has maintained gross borrowing within its authorised limit.

The operational boundary- £96,190m the operational boundary is the expected borrowing position of the Council during the year. Periods where the actual position is either below or over the boundary are acceptable subject to the authorised limit not being breached.

Actual financing costs as a proportion of net revenue stream - this indicator identifies the trend in the cost of capital, (borrowing and other long term obligation costs net of investment income), against the net revenue stream.

	2019/20
Authorised limit	£111,000m
Maximum gross borrowing position during the year	£81,190m
Operational boundary	£96,190m
Financing costs as a proportion of net revenue stream - General Fund	-1.97%
Financing costs as a proportion of net revenue stream - HRA	12.06%

3. Overall Treasury Position as at 31 March 2020

The Council’s treasury management debt and investment position is organised by the treasury management service in order to ensure adequate liquidity for revenue and capital activities, security for investments and to manage risks within all treasury management activities. Procedures and controls to achieve these objectives are well established both through member reporting detailed in the summary, and through officer activity detailed in the Council’s Treasury Management Practices. At the end of 2019/20 the Council’s treasury position was as follows:-

Treasury Management Position

	31 st March 2019 Principal £'000	Rate of Return %	Average Life Years	31 st March 2020 Principal £'000	Rate of Return %	Average Life Years
Debt						
General Fund	2,000	11.63%	5	2,000	11.63%	4
HRA	79,190	3.41%	21	79,190	3.41%	20
Gross Debt	81,190			81,190		
Less CFR	(81,820)			(81,820)		
Over/(Under borrowed)	(630)			(630)		
Less Total Investments held	(53,190)			(56,030)		
Total Net Debt	28,000			25,160		

4. The Economy and Interest Rates

UK. Brexit. The main issue in 2019 was the repeated battles in the House of Commons to agree on one way forward for the UK over the issue of Brexit. This resulted in the resignation of Theresa May as the leader of the Conservative minority Government and the election of Boris Johnson as the new leader, on a platform of taking the UK out of the EU on 31 October 2019. The House of Commons duly frustrated that renewed effort and so a general election in December settled the matter once and for all by a decisive victory for the Conservative Party: that then enabled the UK to leave the EU on 31 January 2020. However, this still leaves much uncertainty as to whether there will be a reasonable trade deal achieved by the target deadline of the end of 2020. It is also unclear as to whether the coronavirus outbreak may yet impact on this deadline; however, the second and third rounds of negotiations have already had to be cancelled due to the virus.

Economic growth in 2019 has been very volatile with quarter 1 unexpectedly strong at 0.5%, quarter 2 dire at -0.2%, quarter 3 bouncing back up to +0.5% and quarter 4 flat at 0.0%, +1.1% y/y. 2020 started with optimistic business surveys pointing to an upswing in growth after the ending of political uncertainty as a result of the decisive result of the general election in December settled the Brexit issue. However, the three monthly GDP statistics in January were disappointing, being stuck at 0.0% growth. Since then, the whole world has changed as a result of the **coronavirus outbreak**. It now looks likely that the closedown of whole sections of the economy will result in a fall in GDP of at least 15% in quarter two. What is uncertain, however, is the extent of the damage that will be done to businesses by the end of the lock down period, when the end of the lock down will occur, whether there could be a second wave of the outbreak, how soon a vaccine will be created and then how quickly it can be administered to the population. This leaves huge uncertainties as to how quickly the economy will recover.

After the Monetary Policy Committee raised **Bank Rate** from 0.5% to 0.75% in August 2018, Brexit uncertainty caused the MPC to sit on its hands and to do nothing until March 2020; at this point it was abundantly clear that the coronavirus outbreak posed a huge threat to the economy of the UK. Two emergency cuts in Bank Rate from 0.75% occurred in March, first to 0.25% and then to 0.10%. These cuts were accompanied by an increase in **quantitative easing (QE)**, essentially the purchases of gilts (mainly) by the Bank of England of £200bn. The Government and the Bank were also very concerned to stop people losing their jobs during this lock down period. Accordingly, the Government introduced various schemes to subsidise both employed and self-employed jobs for three months while the country is locked down. It also put in place a raft of other measures to help businesses access loans from their banks, (with the Government providing guarantees

to the banks against losses), to tide them over the lock down period when some firms may have little or no income. However, at the time of writing, this leaves open a question as to whether some firms will be solvent, even if they take out such loans, and some may also choose to close as there is, and will be, insufficient demand for their services. At the time of writing, this is a rapidly evolving situation so there may be further measures to come from the Bank and the Government in April and beyond. The measures to support jobs and businesses already taken by the Government will result in a huge increase in the annual budget deficit in 2020/21 from 2%, to nearly 11%. The ratio of debt to GDP is also likely to increase from 80% to around 105%. In the Budget in March, the Government also announced a large increase in spending on infrastructure; this will also help the economy to recover once the lock down is ended. Provided the coronavirus outbreak is brought under control relatively swiftly, and the lock down is eased, then it is hoped that there would be a sharp recovery, but one that would take a prolonged time to fully recover previous lost momentum.

Inflation has posed little concern for the MPC during the last year, being mainly between 1.5 – 2.0%. It is also not going to be an issue for the near future as the world economy will be heading into a recession which is already causing a glut in the supply of oil which has fallen sharply in price. Other prices will also be under downward pressure while wage inflation has also been on a downward path over the last half year and is likely to continue that trend in the current environment. While inflation could even turn negative in the Eurozone, this is currently not likely in the UK.

Employment had been growing healthily through the last year but it is obviously heading for a big hit in March – April 2020. The good news over the last year is that wage inflation has been significantly higher than CPI inflation which means that consumer real spending power had been increasing and so will have provided support to GDP growth. However, while people cannot leave their homes to do non-food shopping, retail sales will also take a big hit.

USA. Growth in quarter 1 of 2019 was strong at 3.1% but growth fell back to 2.0% in quarter 2 and 2.1% in quarters 3 and 4. The slowdown in economic growth resulted in the Fed cutting rates from 2.25-2.50% by 0.25% in each of July, September and October. Once coronavirus started to impact the US in a big way, the Fed took decisive action by cutting rates twice by 0.50%, and then 1.00%, in March, all the way down to 0.00 – 0.25%. Near the end of March, Congress agreed a \$2trn stimulus package (worth about 10% of GDP) and new lending facilities announced by the Fed which could channel up to \$6trn in temporary financing to consumers and firms over the coming months. Nearly half of the first figure is made up of permanent fiscal transfers to households and firms, including cash payments of \$1,200 to individuals.

The loans for small businesses, which convert into grants if firms use them to maintain their payroll, will cost \$367bn and 100% of the cost of lost wages for four months will also be covered. In addition there will be \$500bn of funding from the Treasury's Exchange Stabilization Fund which will provide loans for hard-hit industries, including \$50bn for airlines.

However, all this will not stop the US falling into a sharp recession in quarter 2 of 2020; some estimates are that growth could fall by as much as 40%. The first two weeks in March of initial jobless claims have already hit a total of 10 million and look headed for a total of 15 million by the end of March.

EUROZONE. The annual rate of GDP growth has been steadily falling, from 1.8% in 2018 to only 0.9% y/y in quarter 4 in 2019. The European Central Bank (ECB) ended its programme of quantitative easing purchases of debt in December 2018, which meant that the central banks in the US, UK and EU had all ended the phase of post financial crisis expansion of liquidity supporting world financial markets by purchases of debt. However,

the downturn in EZ growth, together with inflation falling well under the upper limit of its target range of 0 to 2%, (but it aims to keep it near to 2%), prompted the ECB to take new measures to stimulate growth. At its March 2019 meeting it announced a third round of TLTROs; this provided banks with cheap two year maturity borrowing every three months from September 2019 until March 2021. However, since then, the downturn in EZ and world growth has gathered momentum so at its meeting in September 2019, it cut its deposit rate further into negative territory, from -0.4% to -0.5% and announced a resumption of quantitative easing purchases of debt to start in November at €20bn per month, a relatively small amount, plus more TLTRO measures. Once coronavirus started having a major impact in Europe, the ECB took action in March 2020 to expand its QE operations and other measures to help promote expansion of credit and economic growth. What is currently missing is a coordinated EU response of fiscal action by all national governments to protect jobs, support businesses directly and promote economic growth by expanding government expenditure on e.g. infrastructure; action is therefore likely to be patchy.

CHINA. Economic growth has been weakening over successive years, despite repeated rounds of central bank stimulus; medium-term risks have also been increasing. The major feature of 2019 was the trade war with the US. However, this has been eclipsed by being the first country to be hit by the coronavirus outbreak; this resulted in a lock down of the country and a major contraction of economic activity in February-March 2020. While it appears that China has put a lid on the virus by the end of March, these are still early days to be confident and it is clear that the economy is going to take some time to recover its previous rate of growth. Ongoing economic issues remain, in needing to make major progress to eliminate excess industrial capacity and to switch investment from property construction and infrastructure to consumer goods production. It also needs to address the level of non-performing loans in the banking and credit systems.

JAPAN has been struggling to stimulate consistent significant GDP growth and to get inflation up to its target of 2%, despite huge monetary and fiscal stimulus. It is also making little progress on fundamental reform of the economy. It appears to have missed much of the domestic impact from coronavirus in 2019-20 but the virus is at an early stage there.

WORLD GROWTH. The trade war between the US and China on tariffs was a major concern to financial markets and was depressing worldwide growth during 2019, as any downturn in China would spill over into impacting countries supplying raw materials to China. Concerns were particularly focused on the synchronised general weakening of growth in the major economies of the world. These concerns resulted in government bond yields in the developed world falling significantly during 2019. In 2020, coronavirus is the big issue which is going to sweep around the world and have a major impact in causing a world recession in growth in 2020.

4.1 Investment strategy and control of interest rate risk

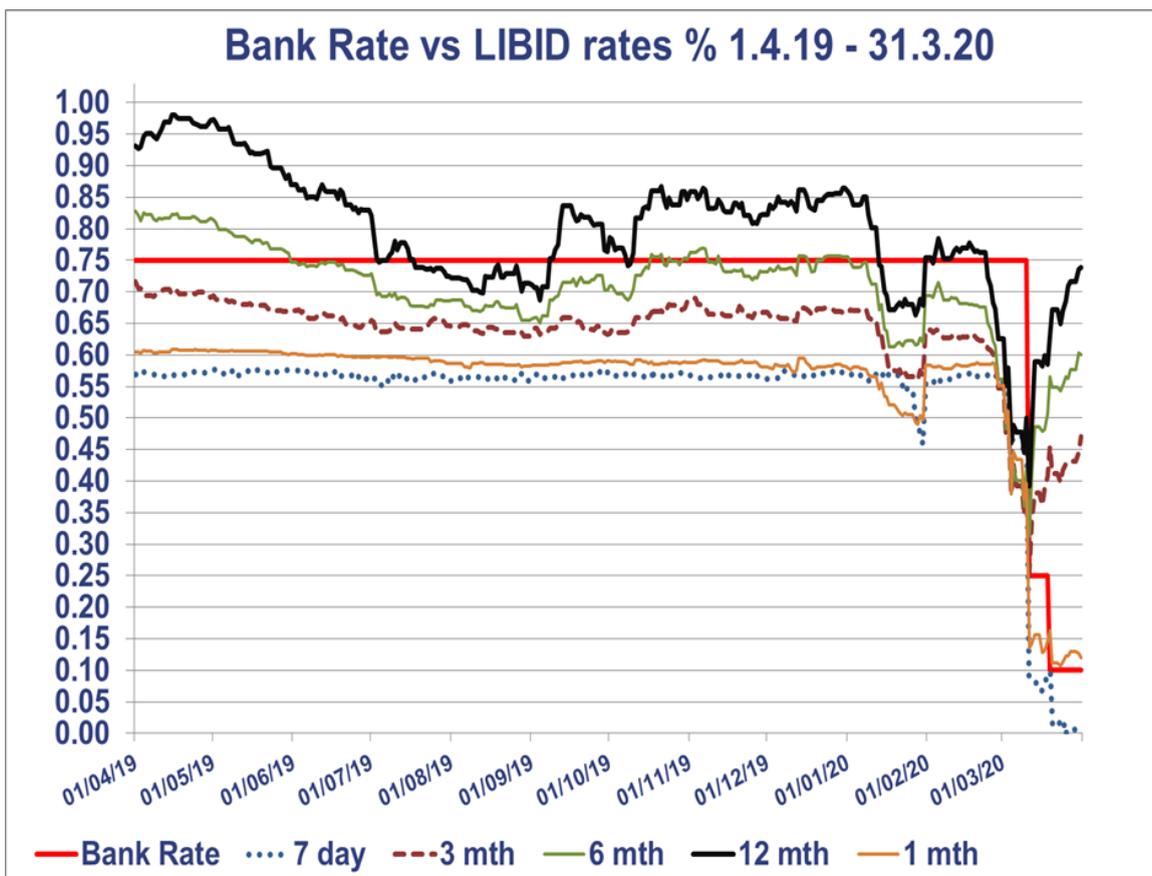

Investment returns remained low during 2019/20. The expectation for interest rates within the treasury management strategy for 2019/20 was that Bank Rate would stay at 0.75% during 2019/20 as it was not expected that the MPC would be able to deliver on an increase in Bank Rate until the Brexit issue was finally settled. However, there was an expectation that Bank Rate would rise after that issue was settled, but would only rise to 1.0% during 2020.

Rising concerns over the possibility that the UK could leave the EU at the end of October 2019 caused longer term investment rates to be on a falling trend for most of April to

September. They then rose after the end of October deadline was rejected by the Commons but fell back again in January before recovering again after the 31 January departure of the UK from the EU. When the coronavirus outbreak hit the UK in February/March, rates initially plunged but then rose sharply back up again due to a shortage of liquidity in financial markets. As longer term rates were significantly higher than shorter term rates during the year, value was therefore sought by placing longer term investments where cash balances were sufficient to allow this.

While the Council has taken a cautious approach to investing, it is also fully appreciative of changes to regulatory requirements for financial institutions in terms of additional capital and liquidity that came about in the aftermath of the financial crisis. These requirements have provided a far stronger basis for financial institutions, with annual stress tests by regulators evidencing how institutions are now far more able to cope with extreme stressed market and economic conditions.

Investment balances have been kept to a minimum through the agreed strategy of using reserves and balances to support internal borrowing, rather than borrowing externally from the financial markets. External borrowing would have incurred an additional cost, due to the differential between borrowing and investment rates as illustrated in the charts shown above and below. Such an approach has also provided benefits in terms of reducing the counterparty risk exposure, by having fewer investments placed in the financial markets.

	Bank Rate	7 day	1 mth	3 mth	6 mth	12 mth

4.2 Borrowing strategy and control of interest rate risk

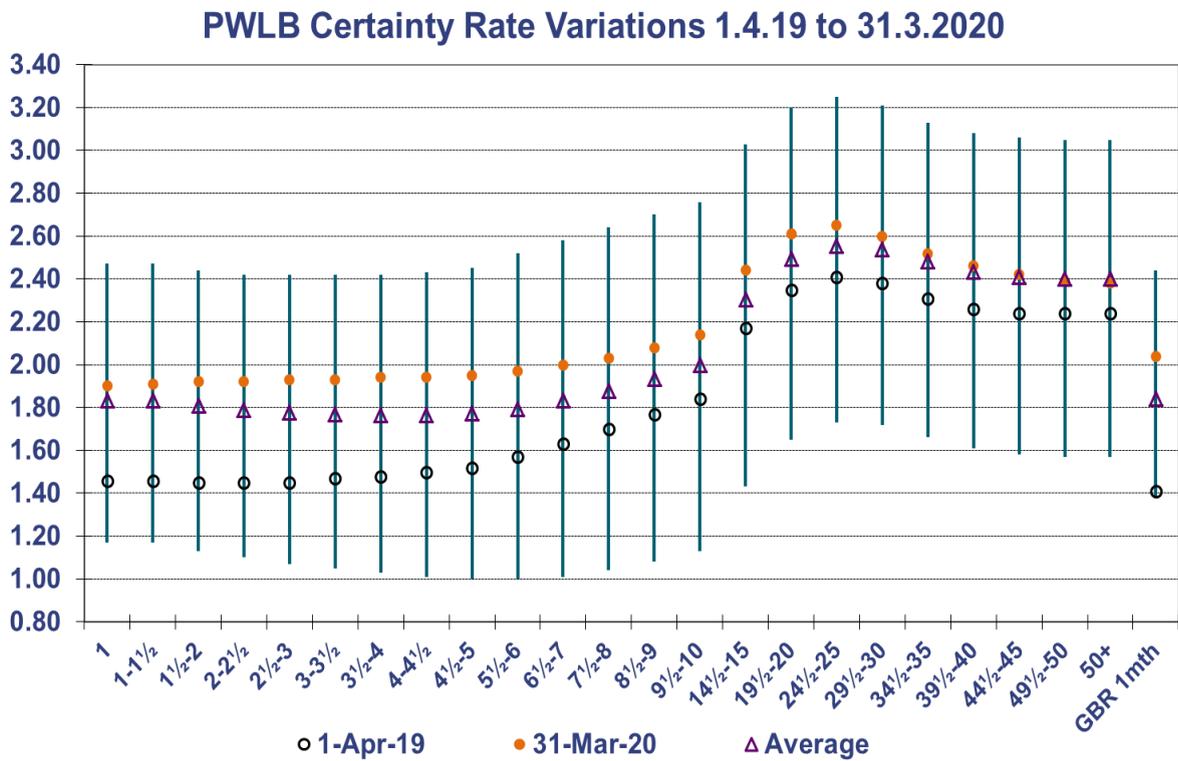

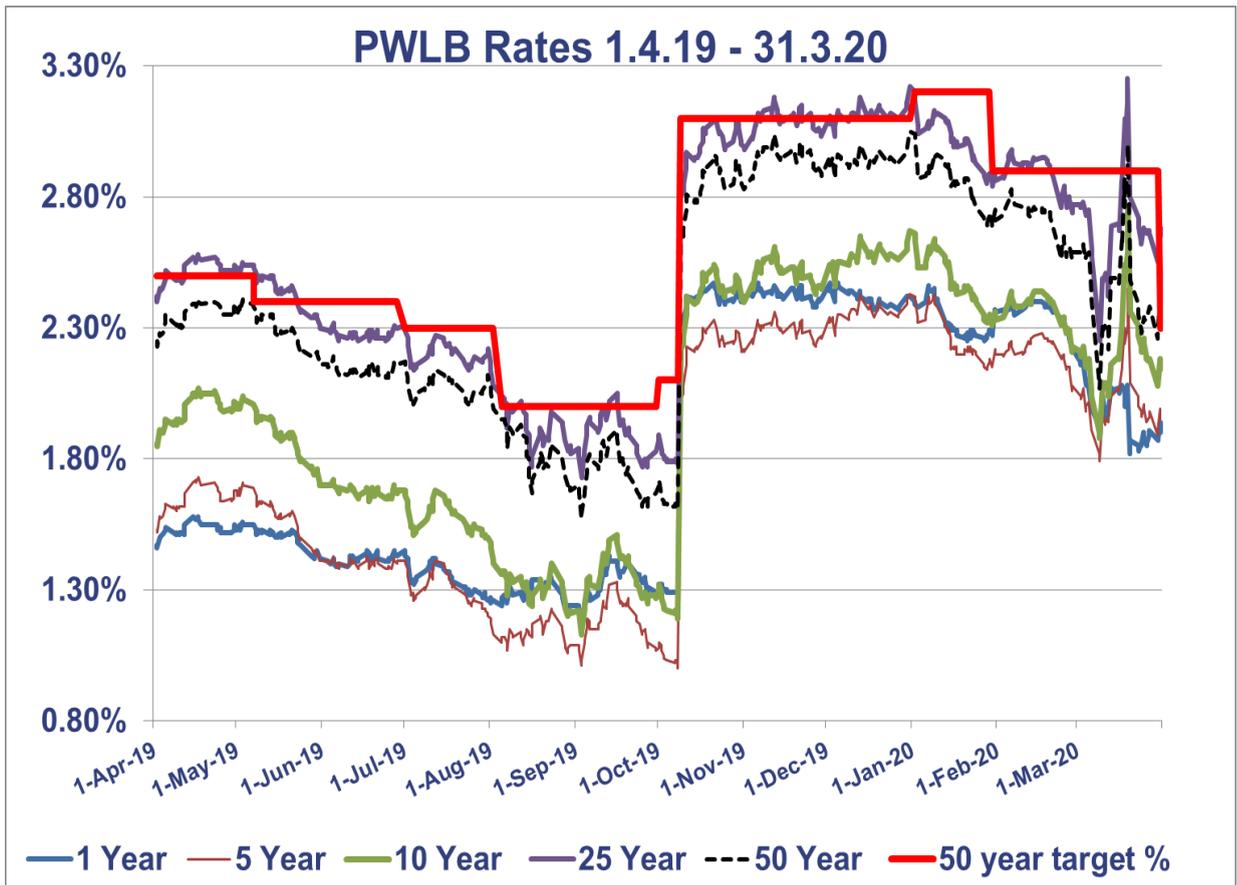

During 2019-20, the Council maintained an under-borrowed position. This meant that the capital borrowing need, (the Capital Financing Requirement), was not fully funded with loan debt, as cash supporting the Council's reserves, balances and cash flow was used as an interim measure. This strategy was prudent as investment returns were low and minimising counterparty risk on placing investments also needed to be considered.

A cost of carry remained during the year on any new long-term borrowing that was not immediately used to finance capital expenditure, as it would have caused a temporary increase in cash balances; this would have incurred a revenue cost – the difference between (higher) borrowing costs and (lower) investment returns.

The policy of avoiding new borrowing by running down spare cash balances, has served well over the last few years. However, this was kept under review to avoid incurring higher borrowing costs in the future when this authority may not be able to avoid new borrowing to finance capital expenditure and/or the refinancing of maturing debt.

Interest rate forecasts expected only gradual rises in medium and longer term fixed borrowing rates during 2019/20 and the two subsequent financial years. Variable, or short-term rates, were expected to be the cheaper form of borrowing over the period.

PWLB rates are based on, and are determined by, gilt (UK Government bonds) yields through H.M.Treasury determining a specified margin to add to gilt yields. There was much speculation during the second half of 2019 that bond markets were in a bubble which was driving bond prices up and yields down to historically very low levels. The context for that was heightened expectations that the US could have been heading for a recession in 2020, and a general background of a downturn in world economic growth, especially due to fears around the impact of the trade war between the US and China, together with inflation generally at low levels in most countries and expected to remain subdued; these conditions were conducive to very low bond yields. While inflation targeting by the major central banks has been successful over the last 30 years in lowering inflation expectations, the real equilibrium rate for central rates has fallen considerably due to the high level of borrowing by consumers: this means that central banks do not need to raise rates as much now to have a major impact on consumer spending, inflation, etc. This has pulled down the overall level of interest rates and bond yields in financial markets over the last 30 years. We have therefore seen, over the last year, many bond yields up to 10 years in the Eurozone turn negative. In addition, there has, at times, been an inversion of bond yields in the US whereby 10 year yields have fallen below shorter term yields. In the past, this has been a precursor of a recession. The other side of this coin is that bond prices are elevated as investors would be expected to be moving out of riskier assets i.e. shares, in anticipation of a downturn in corporate earnings and so selling out of equities.

Gilt yields were on a generally falling trend during the last year up until the coronavirus crisis hit western economies. Since then, gilt yields have fallen sharply to unprecedented lows as investors have panicked in selling shares in anticipation of impending recessions in western economies, and moved cash into safe haven assets i.e. government bonds. However, major western central banks also started quantitative easing purchases of government bonds which will act to maintain downward pressure on government bond yields at a time when there is going to be a huge and quick expansion of government expenditure financed by issuing government bonds; (this would normally cause bond yields to rise). At the close of the day on 31 March, all gilt yields from 1 to 5 years were between 0.12 – 0.20% while even 25-year yields were at only 0.83%.

However, HM Treasury has imposed **two changes in the margins over gilt yields for PWLB rates** in 2019-20 without any prior warning; the first on 9 October 2019, added an additional 1% margin over gilts to all PWLB rates. That increase was then partially reversed for some forms of borrowing on 11 March 2020, at the same time as the Government announced in the Budget a programme of increased spending on infrastructure expenditure. It also announced that there would be a consultation with local authorities on possibly further amending these margins; this ends on 31st July 2020. It is clear that the Treasury intends to put a stop to local authorities borrowing money from the PWLB to purchase commercial property if the aim is solely to generate an income stream.

Following the changes on 11 March 2020 in margins over gilt yields, the current situation is as follows: -

- **PWLB Standard Rate** is gilt plus 200 basis points (G+200bps)

- **PWLB Certainty Rate** is gilt plus 180 basis points (G+180bps)
- **PWLB HRA Standard Rate** is gilt plus 100 basis points (G+100bps)
- **PWLB HRA Certainty Rate** is gilt plus 80bps (G+80bps)
- **Local Infrastructure Rate** is gilt plus 60bps (G+60bps)

There is likely to be little upward movement in PWLB rates over the next two years as it will take national economies a prolonged period to recover all the momentum they will lose in the sharp recession that will be caused during the coronavirus shut down period. Inflation is also likely to be very low during this period and could even turn negative in some major western economies during 2020-21.

5. Borrowing Outturn

No additional external borrowing was undertaken in 2019/20 and no loans were repaid.

The total external borrowings at 31 March 2020 were £81.19m and no rescheduling was done during 2019/20 as the average 1% differential between PWLB new borrowing rates and premature repayment rates made rescheduling unviable. Similarly, there were no debt repayments during the year as the focus of the HRA strategy is to improve the housing stock rather than repay debt.

6. Investment Outturn

Investment Policy – the Council’s investment policy is governed by MHCLG guidance, which has been implemented in the annual investment strategy approved by the Council on 25th February 2019. This policy sets out the approach for choosing investment counterparties, and is based on credit ratings provided by the three main credit rating agencies supplemented by additional market data (such as rating outlooks, credit default swaps, bank share prices etc.).

- The investment activity during the year conformed to the approved strategy, and the Council had no liquidity difficulties.
- Investments held by the Council at 31/3/2020 were £51.030m (£44.760m 2018/19) of internally managed funds. The internally managed funds earned an average rate of return of 0.929% (0.7815%) 2018/19 and the comparable performance indicator is the average 6 month LIBID rate, which was 0.636% so this has out performed this rate. The total interest earned was £562k, compared to a budget of £390k for both Internal and external funds.
- Externally Managed property Funds investment income earned £181k this being the first full year of investment. The investment returns are included in the table below. The Property funds have both performed higher than the internal managed funds average rate of return of 0.929% and the 12 month average LIBID rate 0.80%

Property Fund	Date Acquired	Original Cost £000	Entry Fee £000	Total Original Cost £000	Q Interest Received 2019/20 £000	Q4 Gross Return 2019/20 %	Q4 Management Fee £000	Q4 Net Return 2019-20 %
Lothbury	01/03/2018	2,417	84	2,501	101	4.16	23.21	3.45
Hermes	26/07/2018	2,500	119	2,619	80	3.19	4.12	3.07
Total		4,917	203	5,120	181			

10. Security of capital remains the key consideration when placing investments. During the year, the Council achieved a higher average rate of return than the benchmark, whilst maintaining a low-risk strategy.

Investments held as at 31 March 2020	Maturity	£000
Liverpool City Council	14/10/2020	2,000
Wyre Forest District Council	09/10/2020	2,000
Close Brothers	24/04/2020	5,000
Bank of Scotland	95 Day Notice	8,000
HSBC	3 Month Notice	5,000

Lothbury Property Fund	n/a	2,500
Hermes Property Fund	n/a	2,500
Total Managed Externally		5,000
TOTAL TREASURY INVESTMENTS		56,030

11. Other Issues

IFRS 9. Risk management will need to take account of the 2019/20 Accounting Code of Practice proposals for the valuation of investments. The valuation of investments previously valued under the available for sale category e.g. equity related to the “commercialism” agenda, property funds, equity funds and similar, will be changed to **Fair Value through the Profit and Loss (FVPL)**.

Following the consultation undertaken by the Ministry of Housing, Communities and Local Government, [MHCLG], on IFRS9 the Government has introduced a mandatory statutory override for local authorities to reverse out all unrealised fair value movements resulting from pooled investment funds. This will be effective from 1 April 2018. The statutory override applies for five years from this date. Local authorities are required to disclose the net impact of the unrealised fair value movements in a separate unusable reserve throughout the duration of the override in order for the Government to keep the override under review and to maintain a form of transparency.
